Curriculum Vitae

COMPUTER SKILLS AND COMPETENCES

I have a five-year experience in programming, strong knowledge of HTML, CSS (Scss/Sass), JavaScript (and TypeScript) and basic knowledge of Python. I have worked on projects using React, Vue.js, Alpine.js, NeDB (MongoDB subset) and Node.js among others. I am also well versed in working with REST APIs and I have used Git as a version control tool throughout my projects.

SOCIAL SKILLS AND COMPETENCIES

I possess strong communication skills, honed through years of customer-facing roles. While working in a popular cafe in Ljubljana, I learned to communicate with coworkers and customers clearly and efficiently and to organise the work process to achieve optimal results.

Project and Features

I have developed and deployed multiple frontend and full-stack web applications, which show my understanding of web development and ability to use new tools and frameworks.

- ▶ **Busbus** – A bus timetable and live tracker app featuring an interactive map. Built with REST APIs to manage NeDB databases and integrate remote API data, providing real-time updates for users.
- ▶ **Book-store** – A full-featured web application with file uploads, user authentication, email notifications, and search functionality. Developed with Node.js and EJS for dynamic, server-side rendering.
- ▶ **Tic-tac-toe** – An online multiplayer game using Socket.io for real-time WebSocket communication.
- ▶ **Tilings, Jumping Dwarf and Sine Line** – A series of retro-style games created from scratch using the p5.js graphics library, showcasing creative coding and strong JavaScript fundamentals.
- ▶ **React and Vue.js** projects – translating Dribbble designs into responsible UIs using modern frontend frameworks, focusing on component-based architecture, reactive data flow, routing, and scalable project structure and organization.

More projects with live demos and source code are available at filipko.com.
